Gold Coast Titans have today announced the appointment of former Sydney Roosters' assistant coach Paul McGregor as the Club's NRL Head Coach. McGregor has signed a three-year deal with the Titans and will take charge of the Gold Coast for the 2016 NRL season. The 58-year-old has significant experience working with elite athletes having coached elite athletes across a number of sports with the Roosters over the last decade. McGregor's first task will be to help the Gold Coast rebuild following an end of season disaster with injuries and suspensions. The Club lost last season's No.1 forward and leading try-scorer, Jarrod Wallace, to retirement, another first-choice centre in Ryan Simpkins to the Wests Tigers and the season's best form forward James Roberts who is recovering from a knee injury. TRANSFER HUB With so much uncertainty over what the Gold Coast's roster will look like at the start of 2016, the Club has decided to recruit a Head Coach who could also act as NRL caretaker Head Coach. McGregor has agreed to be first player out the door, leaving his assistant role to concentrate solely on coaching the Titans' NRL team. McGregor said today that the opportunity to work with the young Titans squad was one of the major reasons for accepting the position. "I'm looking forward to getting started with a youthful and exciting group of players and helping to develop the next generation of Titans. "I have a great reputation with young athletes and particularly with forward players who have a real desire to learn and to be coached. "I am looking forward to working with the Titans to build on the great season we had last year and work with the young squad in pre-season." #BelieveIComeHome - A fast start to the rebuild: [pic.twitter.com/kskAn85eOX](http://pic.twitter.com/kskAn85eOX) — Gold Coast Titans (@GC:Titans) May 25, 2015 VOTE: 6 Australian CEOs who should get the job LISTEN: Titans Podcast: Our picks for successful young coaches

Advanced emulation tool for 8085 microprocessors. The specification of the 8085 microprocessor allows various performance modifications, not only in its conventional setting of 486, but also in its low-end version, the 68881. This free simulation enables you to run and debug 8085 assembly language source code in either a pure memory mode or in a real mode. It supports time-stamping of your processing activity. In this way, you can trace the evolution of a program as it executes, saving it in files or using a memory address for storing its execution when it is run from the command line. Also, in 8085 style, you have access to two configuration parameters that allow you to set virtual gate inputs and outputs. The 8085 is a 16-bit architecture, meaning that it has an address space of 65,536 bytes. A dedicated page is allocated to hold the memory address of the program being executed, a page of data, a stack, etc. The 8085 is a Harvard architecture microprocessor, which means that the external memory address and data buses and carry their information in the same direction.
