The Photo Booth app has morphed from a utility for image capture apps to a standalone photo editor. Add the new “shooting night mode” to the list of black and white effects, as well as the new HDR tools, and a new feature called Musical Lightroom (ML) is here to improve your workflows. ML introduces a new pre-processing of images, allowing you to change no fewer than 13 different parameters, such as contrast, saturation, clarity, shadows, highlights. Not all of the tweaks and tools in the Photo Lab are for the pros. The new “Create Space” feature allows you to apply a special photo treatment including a funky new “Stamp” treatment and others. In the new “Morphology” feature, you can toss “transfuse” or brush a few pixels on an image and the rest of the image will morph pretty quickly. You can also apply an “Alexa Lizard” filter or effects such as “Soft Focus,” “Raised Fisheye” or “Wet-Glass.” All of the touchups are very well done and can be sent to your favorite social networks for sharing. The Color and Black Point Tools are very attractive and useful tools. The Color Picker is fast and works very well. The Black Point Tool is different from most in that it lets you drag points that you can move and adjust to create multiple points of soft focus. Don't want a full Photoshop workflow but want to jump start your photo-editing? Photoshop Elements CC provides video tutorials and templates and has an entire subset of tools that Photoshop lacks. From straightening to adjusting lighting, you can do a lot with just a few mouse clicks and no fancy tools.
