, A: The reason the php code is empty is because you are not accessing your array. When you
print_r(\$data); it outputs all the data in your array as if it were a single result from a database query.
It means that nothing is in your \$data[1], and so in your loop \$i = 1; foreach(\$data as \$item){
\$item[1] is empty. I'm guessing this is what you want? \$name = array(); \$email = array(); \$tel =
array(); \$comments = array(); \$theArray = array(); foreach(\$data as \$item){ \$name[] = \$item[1];
\$email[] = \$item[2]; \$tel[] = \$item[3]; \$comments[] = \$item[4]; \$theArray[] = array("name"=>
\$name,"email"=>\$email,"tel"=>\$tel,"comments"=>\$comments); } print_r(\$theArray); If you want
the entire array, it would be a lot easier for you to just do \$theArray = array(); foreach(\$data as
\$item){ \$theArray = array("name"=>
\$name,"email"=>\$email,"tel"=>\$tel,"comments"=>\$comments); } print_r(\$theArray); Area
